Convenient set solutions with pre-assembled components

Why complicate things when you can do it quickly and easily? When a driver accidentally hits a curb or misses a pothole, the problem is often the steering knuckle on the affected wheel. If a component needs to be replaced, AIC Germany offers a convenient repair solution with its steering knuckle kits. The kits contain all the necessary

components for a quick and efficient replacement. The steering knuckle, wheel bearing, wheel hub, and splash panel are delivered as pre-assembled components ready for installation. Depending on requirements, the kits also include small parts such as bolts and nuts for the drive shafts.

APPLICATIONS:

- ▶ Replacement in the event of accident or corrosion damage.
- ▶ Repairs to restore axle geometry.
- ▶ Maintenance and improvement of driving safety.

AIC Germany already offers 50 pre-assembled steering knuckles for nearly 9,500 vehicle applications.

As of October 2024

ADVANTAGES:

Time savings in the workshop: All relevant parts are included in the set and some are even pre-assembled, eliminating the need for time-consuming individual procurement. This significantly reduces labor requirements.

Easier assembly: Precisely fitting parts simplify installation and reduce the risk of assembly errors.

Durability and safety: All included components are manufactured to a high standard and ensure optimal driving stability and safety.

CONCLUSION:

A steering knuckle kit is the ideal solution for a quick, safe, and cost-effective chassis repair. By providing a complete set of all relevant components, workshops save time and money and can offer customers a long-lasting and safe repair.
